

Charlie Charging Station

A safe, high-quality electric vehicle charger for households.

1-phase & 3-phase versions available.

Charge safely and quickly!

Charging from the North!

Now you can ensure safe and efficient charging at home. Repeated, long-term charging from a standard outdoor socket is not recommended. For safety reasons it is wiser to have a separate charging station at home.

The reliable, Finnish-made Charlie charging station is easy to install and use.

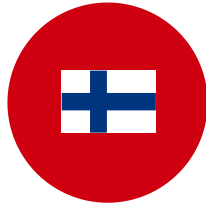

Hood sold separately.

Faster and safer

A standard, 'protective contact' socket is not designed for repeated and prolonged charging of an electronic vehicle. With a specially designed charging station, you can charge your vehicle much faster and safely every time.

Designed and made in Finland

The Charlie charging station by Innohome was designed in Finland with local weather conditions in mind. It works in all weathers. An optional hood provides additional protection for exterior wall installations.

Stylish and compact

Charlie has an understated, Scandinavian look. Its stylish appearance and small size make it ideal for a wide range of surroundings.

Charlie Charging Station

TECHNICAL SPECIFICATIONS:

- Charging mode 3
- Type 2 charging socket
- 305 x 219 x 160 mm (height x width x depth)
- Built-in 6mA DC current monitor
